ABSTRACT

Mode of administration of Homoeopathic medicine has vital role to play in bringing a change towards the cure. Dr. Hahnemann himself searched and experimented with the different mode of administration of dynamic medicine of Homoeopathy by trying to apply through the different conventional mode. Oral tactual and olfaction being widely accepted and conventional practice for administration dominated in every system of medication. Oral administration instilled in all medicines principles became the instinctive mode of administration both for the practitioners as well as for the patient. Discovery of Dr. B.Sahni Transmission of Homoeopathic Drug Energy from a distance are breakthrough in the mode of administration.

In our present case study on applicability of distant mode of administration of Homoeopathic medicine we took up cases of Hypothyroidism. Selection of Homoeopathic medicine was done in most classical way by following the totality of symptoms as prescribed in Homoeopathy. Selected medicine was administered from our OPD to the patient residing at their dwelling place through the hair taken out from them. Results were observed for the change and followed up with the progress in most classical

way of Homoeopathy. Kent' observation for the subsequent changes was strictly adhered to make subsequent changes in medicine as well as their potency. Patients were followed up even after the laboratory reports were proved to be within the range to observe for any relapse.

Homoeopathic drug administration's through transmission of medicine from a distance through hair for Hypothyroidism patients are quite effective mode most compatible with the Homoeopathic principles.

KEY WORDS

Homoeopathy, Drug Transmission, Dynamic Medicine, Hypothyroidism

INTRODUCTION

Versatile nature of Homoeopathic principles has its applicability in different types of disease irrespective of the nomenclature provided to them. Principle based on understanding of totality of symptoms as representative for all types of diseases. Symptoms ranging from spiritual to the physical level remain unified through the common features provided by the vital principles. It only requires bringing changes in the deranged vital principle. Dr. Hahnemann's principles of symptoms similarity requires understanding of the patient as a whole where the dynamism act as binding force. This deranged dynamism is corrected with the intervention from similar nature of dynamics medicine introduced inside the life's field dynamically. Thus mode of administration of Homoeopathic medicine has vital role to play in bringing a change towards the cure. Dr. Hahnemann himself searched and experimented with the different mode of administration of dynamic medicine of Homoeopathy by trying to apply through the different conventional mode. Oral tactual and olfaction being widely accepted and conventional practice for administration dominated in every system of medication. Oral administration instilled in all medicines principles became the

instinctive mode of administration both for the practitioners as well as for the patient.

REVIEW OF LITERATURE

Breaking the conventional principle of medication for the physical body with material substances Dr. Hahnemann brought a paradigm shift towards the treatment of vital plane with the immaterial medicine by developing a medicinal substance beyond material. Not a single molecules being present in Homoeopathic medicine has remained in controversy in spite of its existence with infinite numbers of evidences presented through clinical cases. It is only encumbered mind which kept all away from accepting the reality. Dr. B. Sahni's experimentation on administration of Homoeopathic medicine from a distance proves to be most compatible mode of administration as it reflects the dynamic patterns. Administration of medicine are bridging gap between the patient and medicine. For Homoeopathic system of medicine with dynamics vital life where vital medicine has to be administered Dr Sahni' transmission mode become quite natural. Experimentation has proved it to be most compatible mode for administration of Homoeopathic medicine.

Evolution of Homoeopathic Principle

Dynamic nature of medicine kept Dr. Hahnemann and others spell bound the actual route to be administered to the patient. Dynamism is an influence, which affect any system without getting involved into it as such definitely it pose a challenge to discover the actual Route of administering a dynamic medicine to a diseased individual. The accepted traditional route of administration of oral through the mouth can be easily conceived in the light of material nature of the medicine. Also the tactual, rubbing, injecting the medicine into the physical body seems plausible for the material nature of the crude medicine. This was being followed in a traditional way and still today is considered as one of the route for administration even for the dynamic medicine for homoeopathy but the scientific mind of Dr. Hahnemann could not

digest it in tote. He was trying to find out best route to administer the dynamic property, which has to be received by dynamic vital principle. Dr. Hahnemann made several investigation and observation to determine the best route for administration of the homoeopathic dynamic Medicine. He found out that these dynamic medicine act most surely and most powerfully in the form of vapors by olfaction i.e. inhalation. He discussed these just in the footnote of sec 288 of the 5th edition "it is especially in the form of vapors, olfaction and inhalation of the medicinal aura that in always emanating from a globule impregnated with a medicinal fluid in a high development of power, and placed dry in small vial, that the homoeopathic remedies act most surely and most powerfully". Dr. Hahnemann was of the view that dynamic medicine always emanates the medicinal aura which is surely accepted by the aura of the vital principle. Thus the administration mode is a contact between the two power, that in medicinal power and vital principle. Regarding the actual process he further writes "the homoeopathic physician allows the patient to hold the open mouth of the vial first in on nostril, and in the act of inspiration draw the air out of it into himself and then, if it is wished to give a stronger dose, smell in the same manner with the other nostril more or less strongly according to the strength it in intended the dose should be; he then corks the vial and replace in his pocket case, to prevent any misuse of it, and unless he wishes it he has no occasion for a apothecaries assistance in his practice.

Regarding the power retained in the globule, he admits that he has experienced that power in retained undiminished for at least 18 to 20 yrs even after a thousand operations.

It is thus quiet clear that Dr. Hahnemann was not satisfied with the oral or tactual route of administration and sought a better route where he accepted olfaction is the best; the dynamic property of a substance includes its incessant vibrations which are always in search of a medium to be in

JIFACTOR

routed. Dr. Hahnemann called it medicinal aura. The dynamic properties also involve remote administration to a particle separated from its quantum particle. Thus it seems possible for homeopathic dynamic medicine to be transmitted from a distance. Dr. Hahnemann could not go further due to the natural limitation of his life. Discovery of Dr. B. Sahni of Remote Administration of Homeopathic Remedies from distance using natural belonging of the patient needs careful observation.

Concept of Quantum Energy Teleportation

Hypothesis of Quantum energy teleportation was also put forward by Japanese physicist Masahiro Hotta of Tohoku University which proposed that it may be possible to teleport energy by exploiting quantum energy fluctuations of an entangled vacuum state of a quantum field. The hypothesis proposes that energy may be injected into a zero-point fluctuation of the field at one place, and extracted from a fluctuation at another place. Even for interstellar distance energy transfer, the amount of teleported energy is nonzero, but negligibly small. In contrast, the teleportation protocol will be effective in small quantum worlds of nano-scale devices like quantum computers. The idea is a continuation of quantum teleportation which was originally proposed by C.H. Bennett, *et al.* in 1993 and experimentally confirmed by various experiments in the following years. Protocols of the quantum teleportation transfer quantum information, but cannot teleport energy itself. Quantum energy teleportation is a quantum protocol which transfers locally available energy, in an operational sense, from one subsystem of a many-body system to another in an entangled ground state by using local operations and classical communication (LOCC). The locally available energy indicates the energy which can be extracted from a subsystem by local operations and harnessed for any purpose. The transfer speed can be much faster than the velocity of energy diffusion of the system. It does not allow energy transportation at

superluminal (faster than light) speed, nor does it increase total energy itself contained in a distant place. Though zero-point energy of the ground state exists everywhere in the system and contributes to the amount of the total energy, it is not available by use of ordinary local operations. However, if information about a local zero-point fluctuation, which carries a portion of the zero-point energy, is obtained by a measurement of a distant subsystem via ground-state entanglement, the energy becomes available, and can be extracted by a local operation dependent on the information. The extraction of the energy is accompanied by generation of negative energy density, which is allowed in quantum physics of many-body systems including quantum fields, and retains the local energy conservation law. The remote measurement, which provides the information for energy extraction, injects energy into the measured subsystem. A portion of the injected energy, which amount is larger than that of the energy extracted from the zero-point fluctuation, becomes unavailable because of entanglement breaking by the measurement, and cannot be retrieved by local operations in the measurement region. Thus, during the protocol, the amount of locally available energy decreases in the measurement region, and it increases in the energy extraction region. The injected energy is the input of this teleportation protocol, and the extracted energy is the output. Quantum teleportation, or entanglement-assisted teleportation, is a process by which a qubit (the basic unit of quantum information) can be transmitted exactly (in principle) from one location to another, without the qubit being transmitted through the intervening space. It is useful for quantum information processing, however it does not immediately transmit classical information, and therefore cannot be used for communication at superluminal (faster than light) speed. Quantum teleportation is unrelated to the common term teleportation - it does not transport the system itself, and does not concern rearranging particles to copy the form of an object.

METHODS

In our present case study on applicability of distant mode of administration of Homoeopathic medicine we took up cases of Hypothyroidism. Selection of Homoeopathic medicine was done in most classical way by following the totality of symptoms with constitutional understanding of cases and using symptoms similarity principles with suitable rubrics taken from Synthesis Repertory. Selected medicine was administered from our OPD to the patient residing at their dwelling place through the hair taken out from them. Results were observed for the change and followed up with the progress in most classical way of Homoeopathy. Kent' observation for the subsequent changes was strictly adhered to make subsequent changes in medicine as well as their potency. Use of 50 millesimal potency was considered in accordance with the instructions as laid down in 6th edition of the organon of medicine. Patients were followed up even after the laboratory reports were proved to be within the range to observe for any relapse.

We randomly selected 15 patients attending our clinic diagnosed as suffering from Hypothyroidism as classified under ICD-10-CM Diagnosis Code E03.9 for the study.

1. Case histories were collected from the patients as per the case taking most classical to Homoeopathy.
2. Each case history was analyzed for selection of proper rubrics for the selection of the Homoeopathic Medicines through RADAR software.
3. A strand of HAIR was taken out either cut or uprooted from the head of the patient.
4. Selected medicine was taken in fifty millisimal potency and diluted in water in a 5ml vial and ten stroke was given.
5. Strand of hair taken out from the patient is inserted in the vial containing diluted medicine. This is termed as "Transmitting set". It is put in safe cupboard after putting code number allotted to the patient.

6. When the hair is put in the vial of transmitting set it is termed as Transmission "ON" and when the hair is detached from it is termed as Transmission "OFF"
7. Patient was advised not to take any oral medicine, and report for progress after fifteen days. Follow-up progress was noted when the patient revisited the clinic after fifteen days. Homoeopathic observation of the case was followed up and change in medicine was made considering the Principle of complementary, follow-up, inimical, antidote as per Homoeopathy was adopted.

RESULTS

Out of 15 cases taken up for studies we got encouraging reports. 11 cases were found completely resolved. 03 cases reported with marked improvement, 1 case were reported for moderate improvement but got disinterested and did not report.

CONCLUSION

Administration of drug using the hair from a distance is a subject which needs exploration as a possibility. The definitive change in the patients seen during the course of this work compels to think of the efficacy of this method. The changes are rapid and ameliorating in the patients and especially the acute ones cannot be dispelled as a chance occurrence. The phenomenon draws attention towards the results and demands further exploration.

The possibilities of the positive outcome of this therapeutic procedure are infinite. There are many advantages which have been discussed in the review of literature. The explanation of this method on the scientific platform will definitely boost the usage for benefit of humanity. Patients seated in any corner of the world would be treated by this wonderful therapeutic procedure.

The reduction in the amount of the dose was a phenomenon that was introduced by Hahnemann himself. Contrary to the traditional practice of giving

heavy doses of mixtures of medicine, Hahnemann advocated the use of simple and minimum. The gradual introduction of potency and the concept of arousing the latent powers of the crude medicine by the process of potentisation was the next thing in the homoeopathic philosophy. With further evolution, Hahnemann has advocated the administration of medicine by mere touch and even olfaction. Further, advocacy of the phenomenon of mesmerism gives an insight into the thought process of the master. Transferring the healing powers or the positive energy to a patient from the healer when they are not materially connected speaks of the dynamic transference.

The concept of transmission of homoeo drug energy from a distance is the extension of the philosophy of Hahnemann. It needs an unbiased and thorough investigation into the facts and principles. Homoeopathic drug administration's through transmission of medicine from a distance through hair for Hypothyroidism patients are quite effective mode most compatible with the Homoeopathic principles. This expresses possibilities of research in dynamic nature of medicine and there standard mode of methodology for uses.
